Abstract (en)
A combustor liner panel attachment assembly includes a liner (130) extending from a first end to a second end, and circumferentially to partially define a combustion zone (110). The assembly also includes a spring element (140) located adjacent to a portion of the liner and operatively coupled to a stationary structure, the spring element having a recessed segment (146). The assembly further includes a protrusion feature (142) extending radially outwardly from the liner, the protrusion feature disposed within the recessed segment of the spring element to axially retain the liner.
