Abstract (en)

[origin: EP3640618A1] It is provided an arrangement (1) for high rate fibre optical distributed acoustic sensing, the arrangement comprising: an optical fibre (3); a light launch module (5) adapted to inject a first coherent light pattern (7) into an optical fibre and to inject a second coherent light pattern (9) into the optical fibre while first Rayleigh backscatter light (11) of the first light pattern is propagating in the optical fibre (3), wherein the first coherent light pattern (7) and the second coherent light pattern (9) have a light pattern power above a nonlinear effect related power limit; and a detector (13) adapted to detect the first Rayleigh backscatter light (11) and to detect second Rayleigh backscatter light (15) of the second light pattern (9).
