Abstract (en)  
[origin: EP3641477A1] Provided are a radio bearer configuration method and apparatus. The method includes: determining, by a first node, configuration information for a terminal in case that the first node determines a second node to be connected to the terminal, where the terminal is connected to the first node and the configuration information is configured by the first node and/or the second node; and sending the configuration information to the terminal, where the configuration information is configured for instructing the terminal to be connected to the first node and the second node according to the configuration information, and the terminal establishes multiple connections.
