Abstract (en)

[origin: WO2018236978A1] The present invention is an article or device to facilitate the heating of rounded vessels and other rounded objects comprising a flexible polymeric support comprising a plurality of nested, concentric hollow cylindrical portions each having respective upper edges and adapted to be arranged and fixed in at least two configurations such that the upper edges of the concentric hollow cylindrical portions accommodate at least two respective bowl-shaped contours. The present invention also includes a device to facilitate the heating of rounded vessels or objects, or regularly-shaped or irregularly- shaped objects and containers comprising a container presenting a flexible polymeric support surface, the container containing a malleable material, such that said flexible polymeric support surface is sufficiently malleable so as to be adapted for the heating such objects or containers. Also included is an arrangement for heating such a container or object, and/or for stirring the contents of such a container, while being supported by the article or device of the present invention.
