Abstract (en)
[origin: WO2018234056A1] The present invention relates to detergent particles having perfume, particularly to detergent particles having a coating applied around a surfactant core. It is an object of the present invention to provide a detergent particle that has a core coated with a coating material and perfume. The present inventors have found that it is possible to have a perfume added with the coating of a detergent particle, which lowers the losses that are encountered when the perfume is added into the extrudable mass prior to extrusion while maintaining the perfume delivery. It is also found that the perfume added in the coating of the detergent particle of the present invention does not impact its free flowing properties.
