Abstract (en)

[origin: WO2018237078A1] This invention relates to methods and compositions for assessing an amount of donor- specific fraction of cell-free DNA, such as from a subject. The methods and compositions provided herein can be used to determine risk of a condition, such as transplant organ injury (e.g., cellular injury), cellular rejection grade, antibody-mediated rejection, cardiac allograft vasculopathy, and/or cardiac arrest in a transplant subject.
