Abstract (en)
[origin: WO2018234023A1] The present invention proposes a rotating electrical machine, in particular for a motor vehicle. The machine comprises live parts; a casing (11); a brush holder (24) comprising at least one brush (23), an electric excitation path (44) for exciting said brush and a housing (37) made of an electrically insulating material; and an electronic assembly (36) comprising a control module (61) and an excitation path (48) connecting the excitation path (44) of the brush holder to said control module. The control module (61) comprises a ground path (63), said ground path (63) being electrically connected to the casing (11) via the brush holder (24).
