Abstract (en)

[origin: CN111086676A] The invention relates to a device and a method for producing packs (10) for products in the cigarette industry, wherein a plurality of groups (15) of products together with a separating element (33) at least partially separating the groups (15) are packed into a common casing (17). The separating element (33) first is introduced into a receptacle (75, 76) in a pocket (74), and then the groups (15) of products are introduced into receptacle spaces (80) in the pocket (74), such that that a partition (45) of the partition element (33) is arranged between at least two groups (15) of products, and finally the groups (15) of products with the partition element (33) are pushed together out of the pocket (74) and wrapped into a wrapping (17).
