Abstract (en)  
[origin: WO2015185041A2] The invention relates to a hydraulic noise suppressor (4) for reducing water-borne noise, especially in the area of a construction site when an object (1) is driven into underwater soil (2). Said hydraulic noise suppressor (4) comprises at least two rigid holding elements (11), at least one support structure (5), and noise reducing elements (10) secured to the at least one support structure (5), an upper end (7) of the at least one support structure (5) being secured to at least one of the at least two holding elements (11). According to the invention, the hydraulic noise suppressor (4) can be divided along lateral flanks extending between the upper end (7) and an opposite lower end (8) of the at least one support structure (5). The invention further relates to a method for handling a hydraulic noise suppressor (4).
