Abstract (en)
[origin: US2018368509A1] An article of footwear includes an upper and a sole structure secured to the upper to define an interior cavity. The sole structure comprises a base portion and a sidewall that surrounds a substantial perimeter of the base portion. The article of footwear comprises a pronation feedback system that includes a support structure extending from the sidewall and along the upper at a medial side of the sole structure. The support structure is configured to provide proprioceptive feedback to a wearer corresponding with a rate of pronation of a foot disposed in the interior cavity during a pronation event.
