Abstract (en)
[origin: WO2019003200A1] The invention provides a cover configured for being fitted removably over a handgrip of a mobility aid, comprising :
an elongated body extending in the axial direction for receiving the handgrip, with a first opening at a first end of said elongated, tubular body for receiving the aforementioned handgrip and a second end located opposite the first end that is open or closed, characterized in that the elongated body is made of an elastic material with an elasticity, expressed in Shore A, of 25-55 and the elongated body is provided, at the periphery of the first end, with a flange for rolling up and unrolling the first end in the direction of the second end of the elongated body wherein the length of the elongated body decreases or increases, respectively. The invention also provides methods, uses, and (kit of) components.
