Abstract (en)
[origin: WO2019002066A2] A tube device (1) for securing fluidly interconnected tubes (9) in position in relation to each other. The tube device (1) comprises at least three tube legs (2) of which each tube leg (2) is designed with an aperture (4) extending through the tube leg (2) and being in communication with an incision (5) intersecting a distal end (6) of the tube leg (2), and an interior side (7) delimiting the aperture (4), wherein the interior side (7) is arranged to act upon a tube, of the interconnected tubes (9), received into the aperture (4) through the incision (5) to secure the tube in position with respect to the other interconnected tubes (9). The disclosure also relates to a tube coupling comprising a tube device and a plurality of interconnected tubes.
