Abstract (en)
[origin: WO2019000001A1] The invention relates to a slinger (1) for a melt spinning device, comprising a cylindrical, mechanically shaped base body made of a refractory metal or a refractory metal base alloy, which has a circumferential surface (2) extending in a tangential direction (T), said circumferential surface being delimited by two front sides (3) in the axial direction (A), characterized in that the degree of deformation in the radial direction (R) is greater than the degree of deformation in the axial direction (A).
