Abstract (en)  
[origin: WO2019002021A1] The invention relates to a system (1) consisting of a case (2) and at least one first container (3, 3', 3'') and a second container (3, 3', 3''). Both the first as well as the second container (3, 3', 3'') can be positioned in the case (2), and each container (3, 3', 3'') contains a first, second, third, and fourth lateral wall (3a, 3b, 3c, 3d) and a base (3e) in order to form an interior (8) which is open in a first direction. A first wall element (9a) is positioned between the first and second lateral wall (3a, 3b), a second wall element (9b) is positioned between the second and third lateral wall (3b, 3c), a third wall element (9c) is positioned between the third and fourth lateral wall (3c, 3d), and a fourth wall element (9d) is positioned between the fourth and first lateral wall (3d, 3a). Each wall element (9a, 9b, 9c, 9d) contains a first, second, third and fourth plane (12a, 12b, 12c, 12d). The first plane (12a) is arranged at a first angle ( $\alpha$ ) to the second plane (12b) and the base (3e), and the third plane (12c) is arranged at a second angle ( $\beta$ ) to the second and fourth plane (12b, 12d) such that the first and third plane (12a, 12c) are substantially parallel to each other and the second and fourth plane (12b, 12d) are substantially parallel to each other. The first angle ( $\alpha$ ) and the second angle ( $\beta$ ) are selected such that the first and third plane (12a, 12c) are inclined towards the interior (8) of the container (3) such that an inner face (10d) of the fourth plane (12d) of a first container (3, 3', 3'') lies against an outer face (11a) of the first (12a) plane of a second container (3, 3', 3'') when the base (3e) of the first container (3, 3', 3'') is positioned over the interior (8) of the second container (3, 3', 3'').
