Abstract (en)
[origin: WO2018215530A1] The present invention concerns a container (110) comprising an essentially tubular body (1) forming a first volume for receiving a first fluid (11), said body having a first end (12) and a second end (13), said first end comprising a dispenser provided with an opening for dispensing the contents of the container, said second end comprising a closing element (2), the closing element comprising a flexible wall (24) allowing said flexible wall to move between first and second positions relative to said dispenser (3) in order to thus dispense the contents of the container, the container comprising a capsule (40, 140) with an outer wall forming a second volume for containing a second fluid (21), the capsule being positioned respectively between the dispenser and the flexible wall, the capsule being suitable for releasing the second fluid into said first volume during or after a first movement of said flexible wall, from the first position to the second position of same.
