Abstract (en)
[origin: WO2019001889A1] The invention relates to a construction site elevator system (10) for temporarily bridging at least part of the distance between the top stop (122) of a jump lift (110) and the top work level on the construction site. Said construction site elevator system (10) comprises a frame structure (12) and an elevator (14) within the frame structure (12), the frame structure (12) being designed in such a way as to be insertable into an elevator shaft (104) and being mountable at different positions on the elevator shaft (104).
