Abstract (en)
[origin: WO2019002406A1] The present disclosure relates to a device that reversibly joins to parts or portions of parts. The device may be used in any joining function where it is useful to have a precise and reversible connection. In certain aspects, the device comprises an expansion piece (711) that can be compressed either inside a channel such as a screw hole or around an external portion of a part, by the action of applying tension on a part of the device.
