Abstract (en)
[origin: WO2019002219A1] The subject-matter of the invention is a shaped charge (1) comprising an explosive charge (2) arranged in a casing (3), a coating (4) applied to the charge (2), and means for securing the casing (3) and the charge (2) with the coating (4). Said securing means comprise a ring (5) having an abutment surface for the coating and at least two spacers (6) each covering an angular section and moving radially through the action of a clamping means (11), in order to engage with an internal bearing surface of the casing (3). According to the invention, the axis of the internal thread of the clamping screw(s) (11) is parallel with the axis (7) of the casing, and the spacer (6) is positioned axially with respect to the ring by at least one radial axis (8) allowing the sliding function thereof.
