Abstract (en)

[origin: CN109392095A] The present invention relates to the technical field of wireless communication and specifically provides a terminal, a base station and an information transmission method. The method includes the steps that: the terminal judges whether the base station supports a first scheduling mode or not according to the configuration information of the first scheduling mode sent by the base station, the terminal sends a request message and/or an ability message to the base station if so, and then the terminal receives the scheduling information for the first scheduling mode sent by the base station and perform data transmission or reception according to the scheduling information for the first scheduling mode. The embodiment of the present invention provides the terminal, the base station and the information transmission method, the new scheduling mode is provided, and the terminal and the base station can perform data transmission or reception in the new scheduling mode.
