Abstract (en)
Disclosed herein is a cosmetic container. The cosmetic container includes: a dial configured to receive rotating force; a container part configured such that cosmetics are accommodated in the lower side thereof and the dial is relatively rotatably disposed in the upper side thereof; a piston arm disposed inside the container part, and configured to be selectively lifted and lowered by the rotation of the dial; a piston disposed to come into tight contact with the inner wall of the container part, and configured to be coupled to the lower portion of the piston arm and to be selectively lifted and lowered; and a transfer tube disposed inside the container part, and configured such that a transfer flow path is formed therein; wherein when the piston arm and the piston are lowered and press the cosmetics, the cosmetics enter into the lower portion of the transfer tube and are discharged.
