Abstract (en)

The invention relates to a cutting unit for a shaving apparatus, comprising an external cutting member 20 having a plurality of hair entry openings 21 which define a shaving track, an internal cutting member 30 which is adapted to be rotatable relative to the external cutting member about an axis of rotation 5a, said internal cutting member comprising a carrier 32 adapted to be rotatable about said axis of rotation and a plurality of cutting elements 33 affixed to said carrier. The cutting unit further comprises a fan structure 34 which is adapted to effect a flow of air from said cutting elements of said internal cutting member through an annular gap positioned, relative to the axis of rotation, radially outward of said carrier between the carrier and the external cutting member, wherein said fan structure is positioned at least partially in said annular gap.
