Abstract (en)

[origin: CN111137011A] The invention relates to a machine for the production of printed products. The machine comprises a printing device (3) for printing a printing material (2), a dryer (4) for drying the printed printingmaterial, a conveying device (5) for conveying the printing material, and a blowing device (6) for cooling the conveying device, characterized in that the blowing device is designed as an impingementjet blowing device (6). By means of the invention, sufficient cooling for undisturbed printing can be achieved in an advantageous manner and costs can be avoided or reduced.
