Abstract (en)
A kit for assembly of a modular ramp, wherein the ramp is suitable for pedestrian or wheelchair transport from a ground to a point elevated above the ground, the kit comprising: a leg, at least one walkway cassette, and a first frame; the first frame comprising: a leg connector, a supporting bottom with a ground access opening, a slide stop, and a cassette insertion opening; wherein: the leg connector of the first frame and the leg are configured such that when the modular ramp is being assembled the leg connector can be connected to the leg such that a height at which the leg connector rests on the leg is adjustable and wherein the ground access opening provides access for adjusting the height, and wherein the at least one walkway cassette can be received by the first frame through the cassette insertion opening and thereafter can be held by the first frame such that it covers the ground access opening and forms a planar walkway surface.
