Abstract (en)
[origin: JP2021060034A] To configure a connecting section of an accessory to a vacuum device to be simplified or more flexible in an operation method of a vacuum device, especially a vacuum pump system.SOLUTION: There are provided a step for outputting a message via a connection section following a prescribed communication protocol, a step for determining whether a response to the message is received via the connection section, a step for determining whether an electrical resistor is connected to the connection section when it is determined that the response to the message has not been received, and when it is determined that the electrical resistor is connected to the connection section, a step for identifying or controlling an accessory unit on the basis of the connected electrical resistor.SELECTED DRAWING: Figure 12
