Abstract (en)

[origin: CN111128602A] The present invention relates to an interconnection device (6) and an electrical system, the interconnection device comprising: first and second terminals configured to be connected to first (C1) and second (C2) switching devices, respectively; third and fourth terminals configured to be connected to actuators of the first and second switching devices, respectively; an input terminal (10), an output terminal (12), and control terminals (14, 16); a first circuit connecting the input and output terminals to the first and second terminals; a second circuit connecting the control terminal to the third and fourth terminals to distribute the control signal, and comprising an electronic circuit (8), wherein the electronic circuit (8) is configured to delay transmission of a signal received from the control terminal for controlling the electrical contact to open to the fourth terminal.
