Abstract (en)

An electrical connector assembly (1) arranged for electrically connecting together at least one supply side electrical power cable (302) and a device electrical power cable (202). The electrical connector assembly (1) includes: a first connector (3) arranged for electrical attachment to one of the first and device power cables (302,202), said first connector (3) including a set of first electrical connectors (7); and a second connector (5) arranged for electrical attachment to the other of the first and device power cable s (302,202), said second connector (5) including a set of second electrical connectors (55); the sets of first and second electrical connectors (7,55) are arranged for mating engagement to form an electrical connection between the first and device power cables (302,202) and for disengagement to break the electrical connection; wherein the set of first electrical connectors (7) is moulded into a plastics support member (13), thereby embedding at least part of each first electrical connector (7) within the plastic support member (13).A lighting unit (200) and lighting system (100) that include electrical connector assembly, and a method for manufacturing the first connector (3), are also disclosed.
