Abstract (en)

[origin: WO2019008558A1] The invention concerns a greenhouse for cultivating crop plants, comprising a framework (1) forming a vault structure provided with a ridge (12). The framework is covered in its entirety by a flexible cover (2) defining, in combination with the vault structure, two roof panels (20) extending downwards from the ridge (12), said panels being attached by the horizontal lower edge of same to attachment systems (13) included in the framework (1). The greenhouse comprises a means for tensioning the cover (2), separate from the two attachment systems (13), which are arranged at a distance from said means (3) for tensioning the cover (2).
