Abstract (en)

[origin: WO2019043316A1] A cooling unit (1) for an engine compartment of a motor vehicle comprises a housing configured to be traversed by a flow of air (FA), the housing being delimited by a plurality of peripheral walls (11, 12, 13), and at least one heat exchanger (3, 4) encapsulated in this housing (7). According to the invention, at least one sealing device (16, 17, 18) is arranged laterally with respect to the at least one heat exchanger (3, 4), the at least one sealing device (16, 17, 18) being arranged in contact with this at least one heat exchanger (3, 4) and in contact with another heat exchanger (3, 4) or one of the peripheral walls.
