Abstract (en)

[origin: WO2019008252A1] The present invention relates to an anchoring device for removably securing a child seat to a foldable rear seat of a motor vehicle, the said anchoring device comprising two metal anchor rings (50) mounted on at least one support member (60) intended to be anchored to the floor of the said vehicle; characterized in that the said metal anchor rings (50) are mounted on the said support member (60) about the one same transverse axis, the said device also comprising anti-rotation means (80) intended to be fixed to the said backrest framework (12, 22) of the said rear seat and shaped in such a way that, when the said anchoring device is in the use configuration, they rest against the said rings (50) so as to keep these firmly against a rear tubular crossmember (11A, 21A) of the seating-part framework (11, 21) of the said rear seat.
