Abstract (en)

[origin: WO2019007664A1] The invention relates to an N-heterocyclic carbene (NHC) Re(I) complex having an unsubstituted or substituted benzimidazol-2-ylidene ligand and the use thereof, in particular in a pharmaceutical composition, as a medication and for treating a bacterial infection or a bacterial infestation. The invention further relates to a method for producing an N-heterocyclic carbene (NHC) Re(I) complex and to a method for identifying a molecule that interacts with an N-heterocyclic carbene (NHC) Re(I) complex.
