Abstract (en)

[origin: WO2019008292A2] The invention relates to an output disc carrier (110, 210) forming a dual wet clutch mechanism (10) and arranged in a radial configuration. The output disc carrier (110, 210) has an axial elongation portion (107, 207). The axial elongation portion (107, 207) is provided with a deflector (500) which forms, with the axial elongation portion (107, 207), an angle (α_1 , α_2) ranging strictly from 0° to 45°, preferably from 5° to 20°. The deflector (500) is provided with at least one stiffener.
