Abstract (en)

[origin: WO2019006486A1] The invention relates to a device (1) for adjusting the orientation of a rear stock (2) of a portable firearm (H) relative to a barrel (4) of the portable firearm (H), comprising a ball joint (8), which is arranged between the rear stock (2) and a front part (3) fixedly connected to the barrel (4) and which has a first joint part (9) connected in a positionally fixed manner to the front part (3) or the rear stock (2) and a second joint part (10), which can be pivoted relative to the first joint part and which is connected in a positionally fixed manner to the other of the rear stock (2) or the front part (3), wherein the first joint part (9) and the second joint part (10) are connected to each other in a pivotable and fixable manner by means of a releasable and fixable fixing apparatus (11), the fixing apparatus (11) has at least one fixing element (12), the first joint part (9) has a spherical, in particular ball-shaped, joint head (13), which is mounted in a corresponding recess (14) of the second joint part (10), the fixing apparatus (11) has a clamping part (15), which likewise has a recess (16) for at least partly receiving the spherical joint head (13), and, in the fixed state, the joint head (13) is clamped between the second joint part (10) and the clamping part (15) by means of the at least one fixing element (12).
