Abstract (en)
[origin: WO2019007934A1] The invention relates to an assembly and a method which simplify the communication between two persons (M.1, M.2). The assembly comprises two visual output devices (101) with two display devices (115), an image transmission device (125, 127, 220), and two camera systems (121). Each camera system (121) generates an image of a person (M.1), who is carrying an output device (101) of the assembly. The image transmission device (125, 127, 220) transmits an image from the first camera system (101) to the second visual output device and an image from the second camera system to the first visual output device (101). Each display device (115) presents a visually perceivable display with a transmitted image.
