Abstract (en)
[origin: CN111170250A] The invention provides a method for filling a container (140) with a liquid at an increased pressure, wherein before the filling process is started, the filling process is started; wherein a substantially gas-tight contact is established between the container opening (145) of the container (140) to be filled and the outlet opening (230) of the filling element (200), after completion of the filling process, the substantially gas-tight contact is temporarily released at least once before the container opening (145) is finally separated from the outlet opening (230) to achieve at least partial pressure reduction of the filled container.
