Abstract (en)

[origin: JP2020097925A] To provide a vacuum pump, in particular, a turbo molecular pump capable of transporting a sufficient amount of a synthetic oil for lubricating a rotation supporting portion, not requiring additional installation of an oil pump, improving performance, and not significantly increasing costs.SOLUTION: A synthetic oil having a kinematic viscosity in a range of 4.5-6.5 mm/s at 100°C is used as a working medium of a vacuum pump, the vacuum pump has a working medium storage portion for storing the synthetic oil, and a rotation supporting portion of the vacuum pump is lubricated by the synthetic oil by supplying the synthetic oil to the rotation supporting portion.SELECTED DRAWING: Figure 1
