Abstract (en)
[origin: CN111161980A] Current switching equipment (2) comprises switch elements (4) and actuators (6). Each switch element comprises a moving part with a fixed electric contact (8) and a movable electric contact (12). The moving part can move between an open position and a close position along a moving axis (X). Each actuator (6) comprises a movable part (32), which can move along the axis (X). The movable part can move between the open position and the close position. Each movable part comprises a body defining a shell and a holder. The holder comprises a support member for bearing a movable electric contact (12). The holder is mounted in the shell and can move along the axis (X) relative to the movable part. A stop member, which can move along the axis (X) through an adjusting screw, of the movable part confines the movement of the holder relative to the body.
