Abstract (en)

[origin: US2020144005A1] A switching assembly intended to be joined onto a control assembly provided with an actuation member, the switching assembly comprising a body, an electrical circuit comprising two fixed contacts, the electrical circuit being able to be controlled both by a control switch of a normally-closed type and by a monitoring switch of a normally-open type, linked in series with the control switch. The monitoring switch makes it possible to monitor the correct secure attachment of the switching assembly onto the control assembly by keeping the electrical circuit open as long as the control assembly is mechanically disconnected from the switching assembly.

Abstract (fr)

L'invention concerne un ensemble de commutation (2) destiné à être assemblé sur un ensemble de commande (1) doté d'un organe d'actionnement (10), ludit ensemble de commutation comportant un corps (20), un circuit électrique comportant deux contacts fixe (23a, 23b), ludit circuit électrique étant commandable à la fois par un commutateur de commande de type normalement fermé et par un commutateur de surveillance de type normalement ouvert, relié en série avec ludit commutateur de commande. Le commutateur de surveillance permet de surveiller que l'ensemble de commutation (2) est bien accroché sur l'ensemble de commande (1) en maintenant le circuit électrique ouvert tant que l'ensemble de commande (1) est déconnecté mécaniquement de l'ensemble de commutation (2).
