Abstract (en)

[origin: WO2019012397A1] The invention concerns an aquatic shoe formed from a shoe body (1), a pair of wings (3) and floats (4, 4'), characterised in that the wings (3) are symmetrical, glued together, and linked to the shoe body (1), under the shoe, so as to form a part of the sole (2) of the shoe, and in that the float (4) is integrated below the wings (3), at the sole (2), in such a way that one of the faces of same covers the sole (2), and in that the wings (3) are secured by a pivot link to the two sides of the shoe, such that they lower when the foot rises in the water and rise when the foot lowers in the water, in such a way that they return to their initial position. The invention also concerns the use of the shoe in the fields of water-based recreational activities and/or sport and in the paramedical fields. The shoe according to the invention can be used for rehabilitating animals.
