Abstract (en)
[origin: WO2019011495A1] The invention relates to a deflection roller in a flexible drive, preferably in a lift drive with lift or supporting belts, wherein the deflection roller can be rotatably mounted and comprises several deflection disks mounted on a shaft. The flexible intermediate link, the deflection roller or the deflection disks pass around or are wound around a partial circumference an outer peripheral surface and the deflection disks are rotatably arranged and mounted so that they can move axially with respect to shaft.
