Abstract (en)
[origin: WO2019011482A1] The invention relates to a woven fabric structure and to a method for producing the same, in which structure double layers are provided in some sections in the warp direction and/or in the weft direction, the woven fabric plies that form the associated double layers being woven together at least at two or at three of their longitudinal edges and/or end edges, characterized in that, in the region of the plies that form the associated double layers, threads (supporting threads) which extend perpendicularly to the warp direction and to the weft direction and which hold together the plies that form the associated double layers are provided.
