Abstract (en)

[origin: WO2019201606A1] The invention relates to a device for moving a furniture part held on a furniture body (2) of a piece of furniture. Guide means of the device having at least one pivot arm for pivoting the furniture part (3) are provided, by means of which guide means the furniture part can be moved from a closed position to an open position and back. The device has a base unit having a base plate, on which the guide means act in such a way that a pivot axis about which the at least one pivot arm can be pivoted is perpendicular to a base plate plane spanned by the base plate. A housing element of the base unit (12) lies opposite the base plate (16). According to the invention, a cover element for covering the outside of the housing element is provided. Connecting means are designed in such a way that the cover element can be attached to and removed from the housing element without tools.
