Abstract (en)
[origin: WO2019011847A1] What is described is an arrangement comprising a cable clamp and at least one cable. The arrangement is distinguished by the fact that the cable clamp has at least two openings arranged next to one another through which the at least one cable or in each case one cable is guided with the formation of two cable portions passing through the openings, that the openings each have a clamping slot in a mutually facing opening region, and that the two cable portions are held directly outside adjacent to the openings by a loop of the at least one cable or of a further cable, by means of which loop the two cable portions can be forced into the respective clamping slot.
