Abstract (en)  
[origin: WO2019011818A1] The invention relates to an electrical connection module for electrically contacting two contact elements, said module comprising a first modular unit (1) comprising at least one first contact element (11, 101, 102) and a first magnet element (10), and a second modular unit (2) comprising at least one second contact element (21) and a second magnet element (20), the first modular unit (1) being applied to the second modular unit (2) in a closing direction (X) in order to close the electrical connection module, and, in order to open the electrical connection module, the first modular unit (1) or at least one assembly component of the first modular unit (1), comprising the first contact element (11) and the first magnet element (10), is to be moved in relation to the second modular unit (2), in an opening direction (Y) that is different from the closing direction (X) but not oriented in the opposite direction.
