Abstract (en)
[origin: WO2019011372A1] The present invention relates to a shield element (1) of a printed circuit board connector, which shield element enables maximum tolerance compensation between a printed circuit board (5), on which the printed circuit board connector is secured on the connection side, and a housing wall (4) of a device housing surrounding the printed circuit board (5). According to the invention, the shield element (1) is substantially hollow-cylindrical and can be fitted onto the insulating body (2) on the insertion side so as to also ensure a required connection to ground over the large desired tolerance range.
