Abstract (en)

[origin: CN111197727A] The invention relates to a lighting device (1) for generating a light distribution with a light and dark boundary for a headlight of a motor vehicle. The device is equipped with a light source (10), a light-transmitting body (100), a light feeding element (101) for feeding light emitted by the light source (10), and a projection device (200), wherein the light-transmitting body (100) has a shading device (103) with a light-shielding edge region (104), the shading device (103) is arranged between the light feeding element (101) and the projection device (200) along the light propagation direction, light of the at least one light source (10) is incident into the light-transmitting body (100) via the light feeding element (101), the light is transmitted as a first light beam (S1) in the light-transmitting body (100).
