Abstract (en)
[origin: US2020160642A1] This document relates to a device for sorting, checking and forwarding coins referred to as a hopper, comprising a rotatably mounted carrier disk for feeding coins from a collection receptacle and a device for forwarding coins guided on the carrier disk to a transfer device. The device for forwarding comprises a rotatable transport disk, which is disposed adjoining the carrier disk and designed to individually receive the respective coins guided on the carrier disk and to move them past a sensor unit for determining at least one parameter of the coin. The transfer device comprises a redirection system, which is designed to channel the coin onto different transport paths as a function of the at least one parameter of the coin.
