Abstract (en)

[origin: WO2019015967A1] The invention relates to a domestic dishwasher (GV) having one or more fan wheels (LR1-LR4), which can be rotationally driven and are provided in the treatment chamber above a loading unit (UK, OK), wherein each fan wheel (LR1 – LR4) is rotationally driven in at least one blow-off operation phase (ABG) such that air is sucked by said fan wheel out of the treatment chamber (BR), is accelerated, and is moved forwards and downwards by said fan wheel in the treatment chamber (BR) as an air flow (LS1 - LS4). The air flow impinges on a large-area blow-off region (Q1 – Q4) on the top side of the loading unit (BR) arranged below the fan wheel (LS1 – LS4) and from there, largely blows off amounts of washing liquid (SF) present on the top side of any stored items to be washed (SG).
