Abstract (en)
[origin: WO2019015992A1] The invention relates to a household dishwasher machine (1) comprising a control device (100) for controlling an activatable unit (21) arranged in a washing compartment (4), a communication unit (120) for two-directional communication with a remote server (200) and an optical sensor (110) for detecting an optical sensor signal (A) of the washing compartment (4), the communication unit (120) being designed so as to transmit the detected optical sensor signal (A) to the remote server (200), to receive a control command (B) from the remote server (200), for controlling the activatable unit (21), and to forward the received control command (B) to the control device (100).
