Abstract (en)

[origin: WO2019015989A1] The invention relates to a household dishwasher machine (1) comprising a control device (100) for running a washing program selected from a number of washing programs for washing items to be washed (15, 20) arranged in a washing compartment (4), an optical sensor (110) for detecting an optical sensor signal of the washing compartment (4) while the washing program is running, and an evaluation unit (120) designed to detect loading of items to be washed (15, 20) by a user and the time of the loading during the washing program according to the detected optical sensor signal of the washing compartment (4), and to perform a predefined action according to the determined loading and the determined time.
