Abstract (en)

[origin: WO2019016479A1] The invention relates to a device (1) for homogenising and sampling a liquid, comprising a container (2) that has an opening (3) for collecting said liquid, means (7) for sampling the liquid which cooperate with said container (2), and a stirring element (10). Such a homogenising and sampling device (1) is designed to produce homogeneous liquid samples, more particularly from effluents or wastewater, for future physicochemical analyses.
